

NCLEX Preparation Guidelines

Review infection control guidelines

Review pharmacology categories:

**olols
prils
sins
ase
phyton
statins
sartans
pines
pam/lam
tidine
azole
vir
cin
darone**

Goal = 2,000 practice questions!!!

- ✓ **Utilize Kaplan, Davis, Saunders, Mosby's or any current NCLEX review books that have the new innovative type questions.**
- ✓ **A priority when reviewing is to include practice questions under the categories of: Prioritizing, Delegation, Safety and Infection Control.**
- ✓ **Look up content that you do not know before you answer the question. This will give you more information than the rationale for that question will provide.**

A great source for reviewing theory content is "Nursing Made Insanely Easy."

Just before taking the NCLEX, review seminar notes entitled "NCLEX Preparation." These notes will review various types of NCLEX questions and the guidelines for delegation and prioritization.

Expect questions that require audio assessments, picture assessments, and point and drag applications.
